In The Claims:

- (CURRENTLY AMENDED) A method of viewing the flame produced by a burner in a <u>pyrolysis section of a petroleum cracker</u> furnace, wherein the fuel burnt by the burner is natural gas, comprising viewing the flame through an interference filter adapted to pass light of the wavelength of sodium only.
- 2. (CANCELED).
- 3. (PREVIOUSLY PRESENTED) A method as claimed in claim 1, wherein the fuel burnt by the burner is a mixture of hydrogen, methane and air.
- (PREVIOUSLY PRESENTED) A method as claimed in claim 1, wherein a window is provided in the wall of the furnace through which the burner flame can be viewed.
- 5. (ORIGINAL) A method as claimed in claim 4, wherein the window is made of quartz.
- 6. (PREVIOUSLY PRESENTED) A method as claimed in claim 4, wherein the interference filter is provided as a panel attached to the window of the furnace.
- (ORIGINAL) A method as claimed in claim 6, wherein the panel is hinged to the furnace so it can be placed over the window or removed by a user as required.
- 8. (PREVIOUSLY PRESENTED) A method as claimed in claim 1, wherein a pair of glasses or goggles having an interference filter in each lens thereof is provided.

- (PREVIOUSLY PRESENTED) A method as claimed in claim 1, wherein the interference filter is provided in a camera arranged inside the furnace and adapted to photograph the burner at regular intervals.
- 10. (ORIGINAL) A method as claimed in claim 9, wherein the information from the camera is relayed to an operator who makes any necessary adjustments to the burner from a remote location.
- 11. (PREVIOUSLY PRESENTED) A method as claimed in claim 9, wherein the camera is programmed to photograph the burner about once every 10 minutes.
- 12. (PREVIOUSLY PRESENTED) A method as claimed in claim 9, wherein the camera is programmed to move along a row of burners and to photograph groups of one or more burner flames in turn.
- 13. (CURRENTLY AMENDED) An apparatus comprising a furnace, a burner for burning natural gas in the <u>pyrolysis section of a petroleum cracker</u> furnace and an apparatus for viewing the flame produced by the burner, the_apparatus for viewing the flame comprising an interference filter adapted to pass light of the wavelength of sodium only.
- 14. (ORIGINAL) An apparatus as claimed in claim 13, wherein a window is provided in the wall of the furnace through which the burner flame can be viewed.
- 15. (ORIGINAL) An apparatus as claimed in claim 14, wherein the window is made of quartz.

- 16. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 14, wherein the interference filter is provided as a panel attached to the window of the furnace.
- 17. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 14, wherein the filter is a panel which can be placed over the window or removed by a user as required.
- 18. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 13, wherein the apparatus for viewing the flame comprises a pair of glasses or goggles comprising an interference filter in each lens thereof.
- 19. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 13, wherein the apparatus for viewing the flame comprises a camera in which an interference filter is provided, wherein the camera is a rranged inside the furnace and adapted to photograph the burner flame at regular intervals.
- 20. (ORIGINAL) An apparatus as claimed in claim 19, comprising means for relaying the information from the camera to an operator and means for making any necessary adjustments to the burner from a remote location.
- 21. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 19, wherein the camera is programmed to photograph the burner about once every 10 minutes.
- 22. (PREVIOUSLY PRESENTED) An apparatus as claimed in claim 19, wherein the camera is programmed to move along a row of burners and to photograph groups of one or more burner flames in turn.
- 23. (CURRENTLY AMENDED) A <u>pyrolysis section of a petroleum</u> <u>cracker furnace comprising a burner for burning natural gas housed within</u>

the walls thereof and a window provided in a wall of the <u>pyrolysis section</u> of a petroleum cracker furnace, wherein an interference filter adapted to pass light of the wavelength of sodium only is provided in or on the window.

24. (CURRENTLY AMENDED) Glasses for viewing a flame produced in a pyrolysis section of a petroleum cracker comprising an interference filter provided in each lens thereof, wherein the interference filter is adapted to pass light of the wavelength of sodium only.
